

INTRODUCTION

A client has approached you to help on a web design project that they have been working on. They have a website that provides information of their store locations and their featured products and services. The developer is not good at CSS design and needs your help. Your job is to write HTML, CSS styles and JavaScript to provide the client with an attractive and user-friendly design.

Sample Topics:

=====

- 1 sell flower website
- 2 sell souvenir website
- 3 sell ebook website
- 4 sell phone website
- 5 sell software website
- 6 sell food website
- 7 sell cake website
- 8 sell computer website

DESCRIPTION OF PROJECT AND TASKS

There are several pages that you need to design. The design should use responsive design (use Bootstrap or media query using float and css position).

There are several pages that you need to design:

- [index.html](#)
The home page contains one slideshow and 2 sections: "Featured products", "Upcoming products". Customers can click the "View product" link to go to product details.
- [about.html](#)
This page company profile for the clients. You can put some images , videos and text content.
- [team.html](#)
This page displays our members in the company and short description about each staff.
- [clients.html](#)
This page display about quotation from our clients. You can use image with description and quotation.
- [contact.html](#)
This page contains 1 form: "Contact US" with the following fields like Name, Phone number, Subject and Description
- [gallery.html](#)
This page displays a list of all product or services or using grid gallery.
- [detail.html](#)
This page displays information of a selected product with related pictures. "Order now" button is clickable.

Sample Layout

Header	
Top Menu	
Menu <ul style="list-style-type: none">• Menu1• Menu2• Menu3	Main Content
Footer
